

### How does it work?

Your doctor will use the SmartSkin laser to apply a series of tiny pulses of laser energy to your skin. As these microscopic holes heal, new younger looking skin is revealed and collagen is stimulated deep within your skin.

### How many treatments will I need?

You and your doctor will carefully determine the best course of treatment based on your cosmetic and downtime expectations. You may opt for two or three sessions with minimal downtime. Or if you're able to take a longer downtime, experience dramatic results in just one treatment!

### What does the procedure feel like?

A topical anesthetic is generally applied before the procedure, although your physician may recommend other approaches to make you comfortable. You will relax in the doctor's chair and feel heat and tingling as the laser scanner moves across your face.

### How long will the results last?

The entire face can be treated in as little as 15-30 minutes, with results lasting years, with proper skin care and protection.

### What should I expect following treatment?

Immediately after the treatment, your skin will feel warm and appear to be sunburned. Your body naturally starts working by replacing the aged skin cells with new ones. After a few days, you will notice a more even skin tone, smoother
